

Please make an app to search GitHub repositories.

- Use the following API from GitHub: <https://docs.github.com/en/rest/reference/search>
- Implement a design in CSS. It can be as simple as you want.
- Implement throttling to fetch data from the API.
- Implement pagination.
- Use TypeScript.
- Use React.

When complete, please post the app to GitHub and send us the URL. * Refrain from adding our company name anywhere in your code or comments.

Thank you.
